Instructions for Raw data

Choi and Lee, "Communication, Coordination, and Networks," forthcoming to JEEA

The dataset for each of the nine treatments is stored in a single excel file. For example, "Star_T5_All.xlsx" contains all three-session data for the Star network with T = 5.

Variables in each dataset are as follows.

1. Session: session number
2. Period: the number of round in a given session in which decisions were taken
3. Subject: the ID of subject in a session
4. S_subject: the unique ID of subject for all session with three digits; the first number indicates the number of session;
5. Group: the indicator for a group
6. Profit: the number of tokens earned in a round
7. TotalProfit: the total number of tokens earned by that round in a session
8. Type: the position in a network – N (0) / E (1) / S (2) / W (3)
9. Mt: the message chosen in communication period t – n (0) / e (1) / s (2) / w (3)
10. Action: the action chosen in the action stage – n (0) / e (1) / s (2) / w (3)
